Introduction

Today in the fast-moving world, every individual has loads of work. Due to which a person is bound to have small or big health issues in their life, and they should go to the doctor once a year. In this job-oriented world, they must attend to their work and while doing so they will try to skip the long doctor's queue for appointments. We have a brilliant solution to tackle this problem, just bring the doctor home with our **Health Care Assistant powered by AI and Deep Learning.**

Flowchart

Problem Statement-1

Predicting the disease name based on various symptoms given by patient to bot using ML algorithms and reliable datasets

Flowchart

Importing the Datasets containing symptoms and disease names

Slicing the dataset at *appropriate* location

Splitting the data into train and testing Dataset

Apply the DecisionTreeClassifier for training the symptoms and binary dataset

Prediction of appropriate disease on the basis of symptoms selected

Algorithm

▪ Decision Tree Classifier

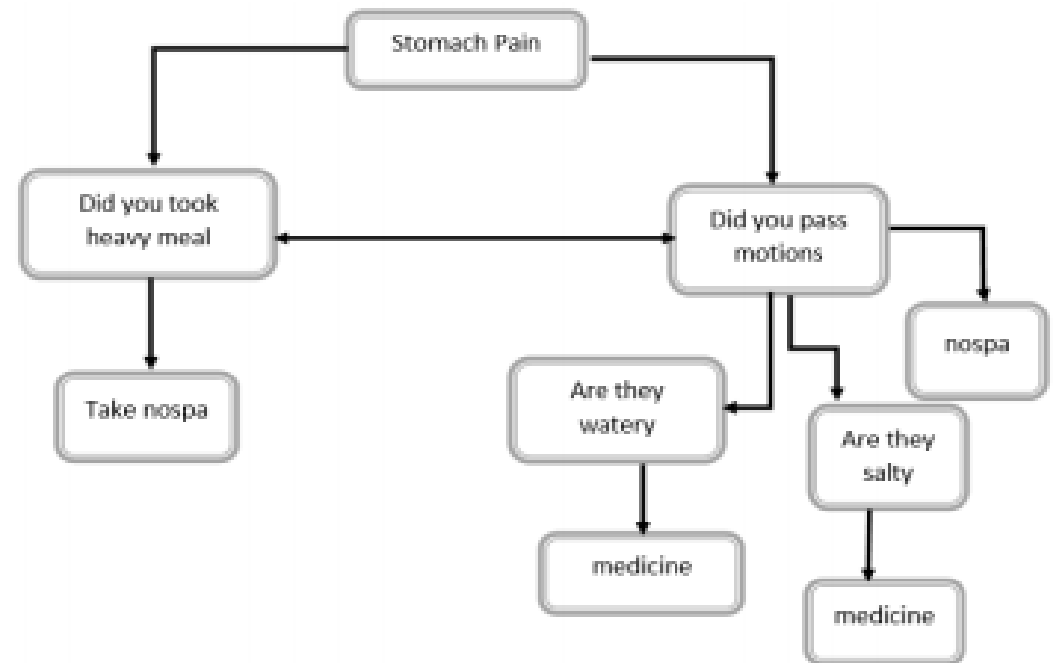

Decision Trees (DTs) are a non-parametric supervised learning method used for classification and regression. The goal is to create a model that predicts the value of a target variable by learning simple decision rules inferred from the data features

Types of Decision Tree

By : Mohd. Noor Abdul Hamid, Ph.D
(Universiti Utara Malaysia)

Decision tree for Simple and Complex disease

Advantages

When using Decision tree algorithm, it is not necessary to normalize the data.

Decision tree algorithm implementation can be done without scaling the data as well.

When using Decision tree algorithm, it is not necessary to impute the missing values.

The data pre-processing step for decision trees requires less code and analysis.

The data pre-processing step for decision trees requires less time.

The concept behind decision tree is more familiar to programmers and comparatively easier to understand than other similar algorithms.

Cosine Similarity

- Cosine similarity is a metric used to measure how similar the documents are irrespective of their size.
- Mathematically, it measures the cosine of the angle between two vectors projected in a multi-dimensional space.
- The cosine similarity is advantageous because even if the two similar documents are far apart by the Euclidean distance (due to the size of the document), chances are they may still be oriented closer together. The smaller the angle, higher the cosine similarity.

Chronic kidney disease

Overview

Chronic kidney disease, also called chronic kidney failure, describes the gradual loss of kidney function. Kidneys filter waste and extra fluid from your blood and excrete it in your urine. When chronic kidney disease reaches an advanced stage, danger to your health is high.

In the early stages of chronic kidney disease, you may have few signs or symptoms. Complications can develop as kidney function becomes more impaired.

Treatment for chronic kidney disease focuses on slowing the progression of the kidney disease and managing complications. In advanced stage kidney failure, which is fatal without artificial filtering (dialysis) or a kidney transplant.

[Chronic kidney disease care at Mayo Clinic](#)

Symptoms

Signs and symptoms of chronic kidney disease develop over time if kidney damage progresses steadily.

- Nausea
- Vomiting
- Loss of appetite
- Fatigue and weakness
- Sleep problems
- Changes in how much you urinate
- Decreased mental sharpness
- Muscle twitches and cramps
- Swelling of feet and ankles
- Persistent itching
- Chest pain, if fluid builds up around the lining of the heart
- Shortness of breath, if fluid builds up in the lungs
- High blood pressure (hypertension) that's difficult to control

Signs and symptoms of kidney disease are often nonspecific, meaning they can also be caused by other conditions. For lost function, signs and symptoms may not appear until irreversible damage has occurred.

The Three Documents and Similarity Metrics

Considering only the 3 words from the above documents: 'sachin', 'dhoni', 'cricket'

Doc Sachin: Wiki page on Sachin Tendulkar	
Dhoni	- 10
Cricket	- 50
Sachin	- 200

Doc Dhoni: Wiki page on Dhoni	
Dhoni	- 400
Cricket	- 100
Sachin	- 20

Doc Dhoni_Small: Subsection of wiki on Dhoni	
Dhoni	- 10
Cricket	- 5
Sachin	- 1

Document - Term Matrix (Word Counts)

Word Counts	"Dhoni"	"Cricket"	"Sachin"
<i>Doc Sachin</i>	10	50	200
<i>Doc Dhoni</i>	400	100	20
<i>Doc Dhoni_Small</i>	10	5	1

Similarity Metrics

Similarity or Distance Metrics	Total Common Words	Euclidean distance	Cosine Similarity
<i>Doc Sachin & Doc Dhoni</i>	10 + 50 + 10 = 70	432.4	0.15
<i>Doc Dhoni & Doc Dhoni_Small</i>	20 + 10 + 7 = 37	204.0	0.23
<i>Doc Sachin & Doc Dhoni_Small</i>	10 + 10 + 7 = 27	401.85	0.77

Result

Doc Bot: I am DOCTOR BOT or Doc Bot for short. I will answer your queries about Chronic Kidney Disease. If you need to leave, please say so.
pe Bye!
hi
Doc Bot: howdy
what is chronic kidney disease and what are the risk factors ?
Doc Bot: Diseases and conditions that cause chronic kidney disease include:

- Type 1 or type 2 diabetes
- High blood pressure
- Glomerulonephritis (gloe-mer-u-low-nuh-FRY-tis), an inflammation of the kidney's filtering units (glomeruli)
- Interstitial nephritis (in-tur-STISH-ul nuh-FRY-tis), an inflammation of the kidney's tubules and surrounding tissues
- Polycystic kidney disease
- Prolonged obstruction of the urinary tract, from conditions such as enlarged prostate, kidney stones and some cancers
- Vesicoureteral (ves-ih-koe-yoo-REE-tur-ul) reflux, a condition that causes urine to back up into your kidneys
- Recurrent kidney infection, also called pyelonephritis (pie-uh-low-nuh-FRY-tis)

Risk factors

Factors that may increase your risk of chronic kidney disease include:

- Diabetes
- High blood pressure
- Heart and blood vessel (cardiovascular) disease
- Smoking
- Obesity
- Being African-American, Native American or Asian-American
- Family history of kidney disease
- Abnormal kidney structure

what are the signs and symptoms of chronic kidney disease
Doc Bot: Chronic kidney disease care at Mayo Clinic

How kidneys work

Symptoms

Signs and symptoms of chronic kidney disease develop over time if kidney damage progresses slowly. Symptoms of chronic kidney disease may include:

Nausea

Vomiting

Loss of appetite

Fatigue and weakness

Sleep problems

Changes in how much you urinate

Decreased mental sharpness

Muscle twitches and cramps

Swelling of feet and ankles

Persistent itching

Chest pain, if fluid builds up around the lining of the heart

Problem Statement 3

To provide contact information
of doctors who treat the
relevant disease or condition.

Introduction

- We must find out Expert Doctors for those particular diseases and their clinics or hospitals address links.
- We 1st found out the dummy data set for this and then worked upon it.
- We had to link it with the other 2 datasets and then give the appropriate results.

Flowchart

Import the Symptom_severity dataset

Then calculate the Symptom_severity with the formula using number of days from which he is having that problem

Accordingly advice the patient that he need to consult or not

If he need to consult bot will provide him the information about the doctor to be approached

Dataset

itching	1	
skin_rash	3

lethargy	2	
patches_in_throat	6	
irregular_sugar_level	5	
cough	4	

Dimensionality reduction

The number of input variables or features for a dataset is referred to as its dimensionality.

Dimensionality reduction refers to techniques that reduce the number of input variables in a dataset.

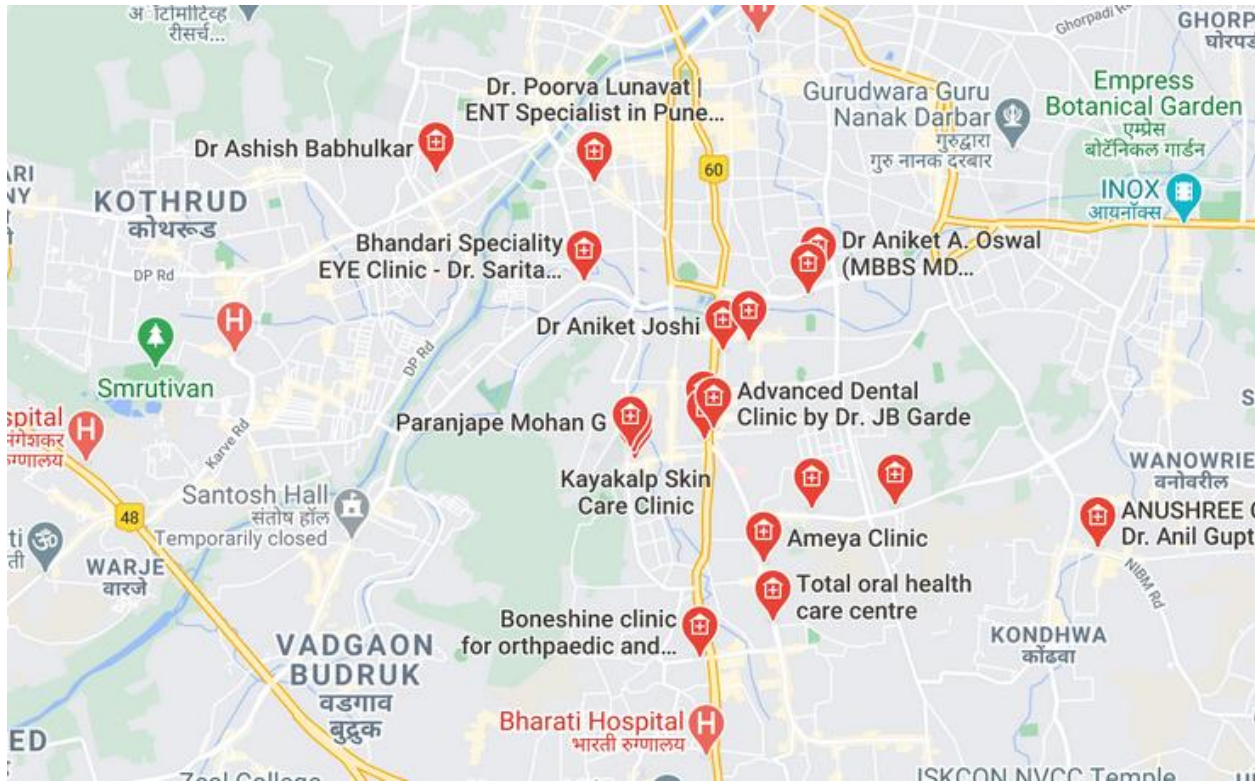

Now in this part of project we want just diseases column to be copied in new Data Frame, so reduction is done in the way that just diseases column gets copied.

diseases = dimensionality_reduction.index

Working

- First we read the dataset
- We create a new blank data frame.
- We extract the diseases column from the other dataset and put it in the new blank dataset.
- Then from the previous dataset consisting Doctors' name and Addresses we need to copy that into newly formed.
- So that the disease found in previous step of program can be linked with Doctors' name and Addresses links.
- Then at the last we print the name of the disease, confidence level, Doctor's name for consultation and his clinics or Hospital's address.

Result

The screenshot displays the Practo website interface for Dr. Neha Sood. The header includes the Practo logo and navigation links for Doctors, Consult, Pharmacy, and Diagnostics. A search bar is present with the location set to Delhi. The main content area shows Dr. Neha Sood's profile, including her photo, name, and specialization (ENT/ Otorhinolaryngologist). It also displays her qualifications (MBBS, DNB), experience (19 years), and a 55% rating. The profile is claimed and has medical registration verified. A 'Call Now' button is visible. The right sidebar shows the clinic's location (BLK Super Speciality Hospital) and a 'Contact Clinic to Book Appointment' button. The bottom section shows the clinic's location (Pusa Road, Delhi) and a 'Consult Other ent/ otorhinolaryngologist' button.

The model suggests:

Consult ['Dr. Neha Sood']

Visit ['https://www.practo.com/delhi/doctor/dr-neha-sood-ear-nose-throat']

Process finished with exit code 0

Confidence Level

- What does the Confidence level tells us, it tells us about how much the percentage or chances of person is having that particular disease.
- Higher the confidence level, higher are the symptoms found for that disease in the body, means more chances of having that disease.
- And Confidence level also tells the accuracy of the program.
- We have used a simple formula to calculate confidence level, i.e **[No. of symptoms present/ Total no. of symptoms given]**.
